

SL27-29-32W VENETIAN

MOTORISED BATTERY OPERATED WITH SOLAR PANEL

It's a battery-powered motorized system with the function of raising/lowering and tilting blinds.

Raising, lowering, or tilting the blinds is done using a touch control device that is magnetically attached to the window (or glass), or optionally, through a remote control. The battery can be recharged in two alternative ways: using a micro-USB charger or through an external solar panel, allowing for automatic and continuous charging.

The SL29C system comes standard with a 29mm-wide warm spacer bar in black (RAL9005). The SL27 and SL32 systems feature spacer bars of 27mm and 32mm respectively, made of extruded aluminum (also available in black).

This system is designed to be incredibly easy to install and can be used with all types of window frames, including those already in place. No wires or electrical contacts are necessary.

The battery module can be mounted on the window frame (along with the opening sash) or on the insulated glass unit (near the glazing bead).
